

Online Data Table 2: Absolute Mobility by Child Birth Cohort and State

Description

This table reports the probability that a child earns more than their parents between ages 25-35 by state for child birth cohorts by decade in the range 1940-1980.

Codebook

Variable	Type	Description
state_fips	Num	Federal Information Processing Standard (FIPS) state code
state_name	String	Name of State
cohort	Num	Child birth cohort
cohort_mean	Num	Mean probability for a child from a given birth cohort to earn more than their parents
